

Solutions for **concrete element** industry

FOR BETTER LOGISTICS

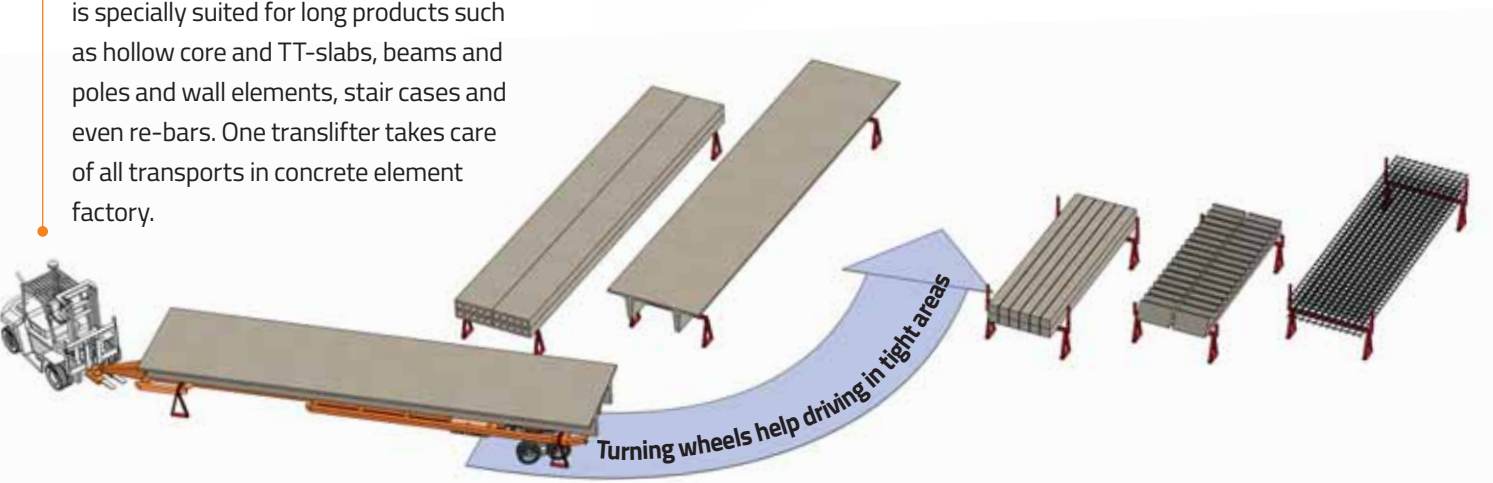

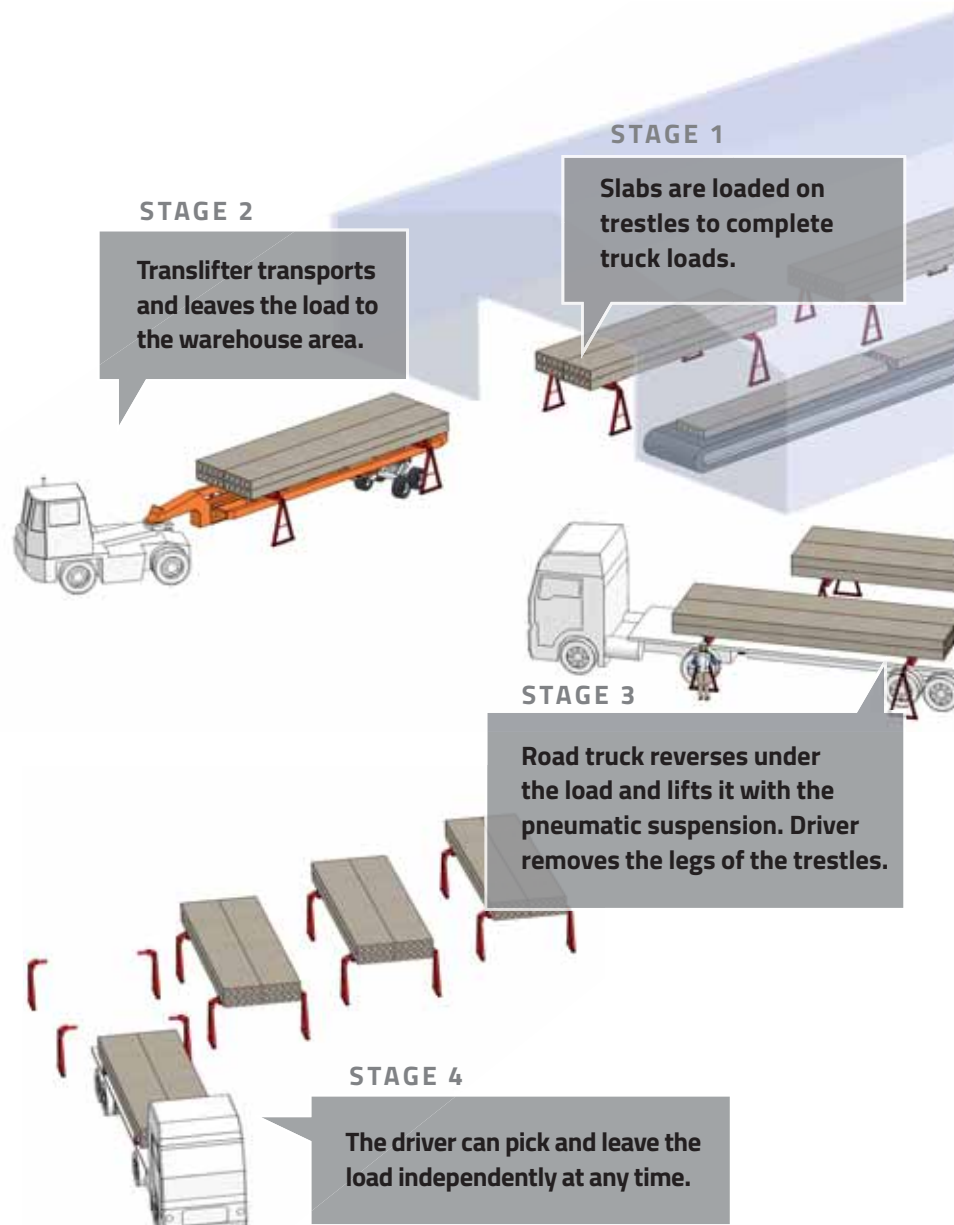

Movella offers versatile transport solutions for the concrete element industry. Translifters, U-loaders and load platforms improve efficiency.

Road transport trestle system

Hollow core slabs from production to the customer with as little handling possible. No cranes in the warehouse area, no handling damages, minimum man power.

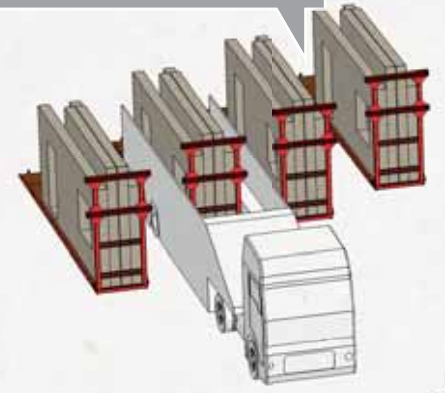

Translifter eliminates transport and warehousing problems

Movella translifter eliminates transport and warehousing problems in concrete element factory. Self loading translifter picks up the load, transports it out and leaves on the warehouse area without any help from cranes. Movella translifter is specially suited for long products such as hollow core and TT-slabs, beams and poles and wall elements, stair cases and even re-bars. One translifter takes care of all transports in concrete element factory.

STAGE 3

Inloader picks up the load and drives to the working site.

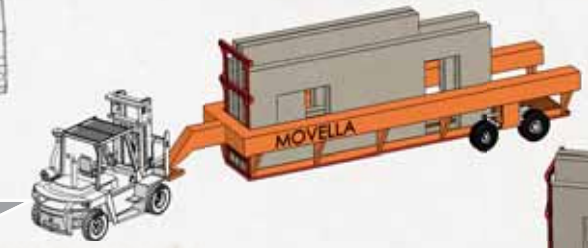

STAGE 1

Wall elements are loaded on cargo flats to shipping ready loads.

STAGE 2

U-loader transports the loads to the warehouse area.

U-loader for transport and warehousing of wall elements

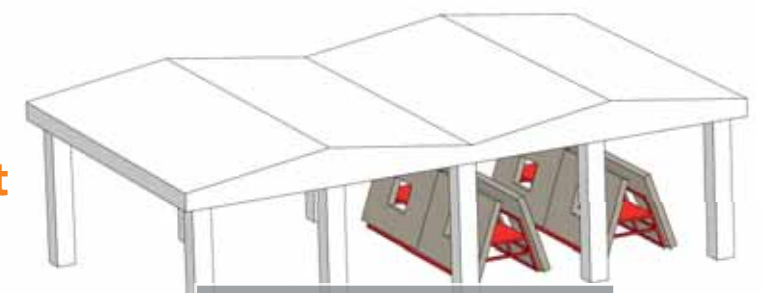

Movella U-loader solves the warehousing problems in the wall element production and minimizes handling of the elements. Movella U-loader is like the inloaders which are commonly used in

the road transports but Movella U-loader is designed for internal logistics: it is safe, easy to use and technically robust. Movella U-loader is compatible to standard cargo flats of inloaders. U-loader can be

operated by a terminal tractor or a big forklift truck.

A-cassette for wall element production

A-cassette is both working platform in production and transport platform between production stages and the warehouse. This reduces handling of the elements and improves efficiency. Working with A-cassette is safe as it is equipped with proper stairs and safety rails.

Translifter transports the A-cassette from production stage to another.

A-cassette is both working platform in production and transport platform between production stages.

Movella transport equipment

NT25 translifter

U-loader

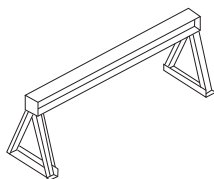

NT25	22 – 40	4 – 25	2100	700	1050	F, W, T
NT25H	25 – 35	6 – 25	2100	950	1750	F, W, T
U-loader	32	9,5				F, T

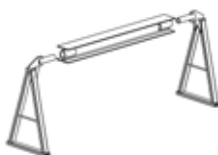

Option:
Telescopic frame

F = Forklift truck
W = Wheel loader
T = Terminal tractor
